# What We Will Cover Today

Understand the concept of  
**Machine Learning** and How it  
Applies to our everyday life

Understand how **changes in  
Consumer Behaviour**  
makes Machine Learning  
relevant to your business

Learn what you can do today to  
**Begin Leveraging Machine  
Learning in marketing** to Grow  
Your Business

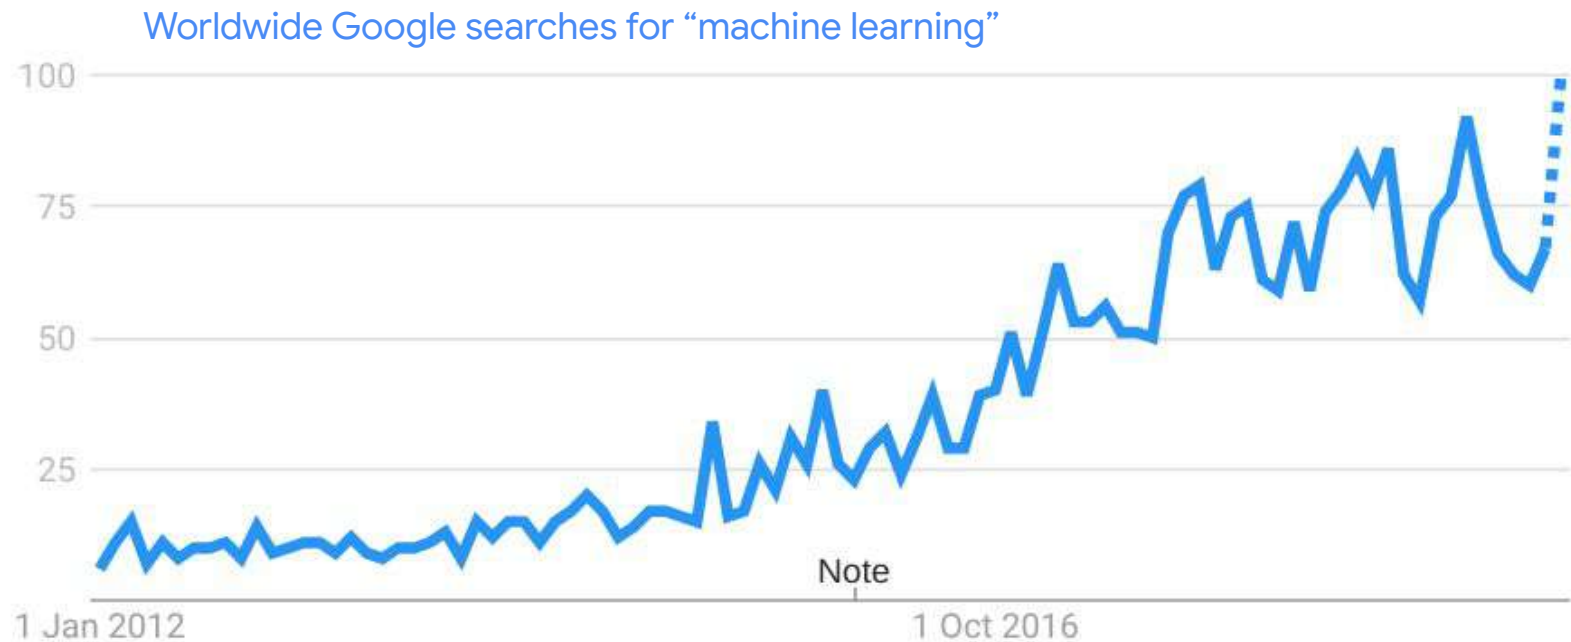

“Machine learning is a core, transformative way by which we’re rethinking how we’re doing everything.”

Sundar Pichai, CEO, Google

# We're just at the beginning..

# So what is machine learning?

**Basically, it means that computers don't need to be told exactly what to do.**

They can be given an objective and lots of data, and teach themselves how to do it

At 10 minutes?  
it's random luck

At 120 minutes?  
It never misses

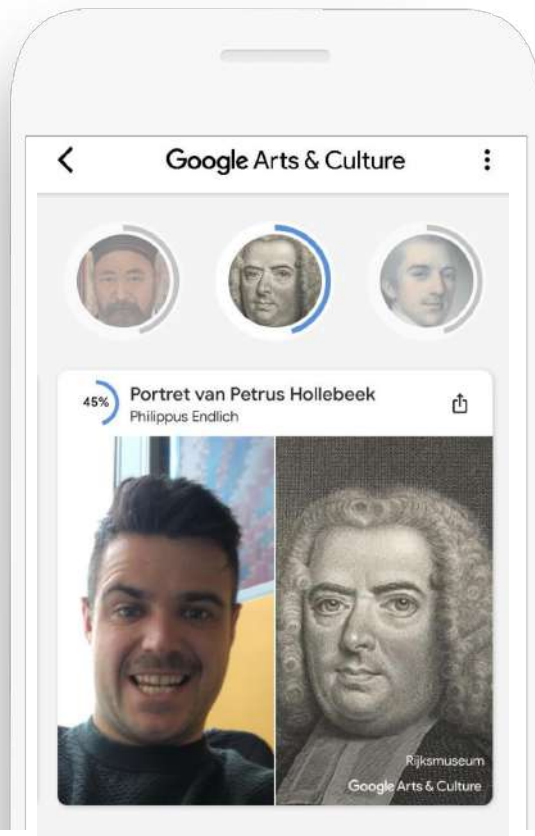

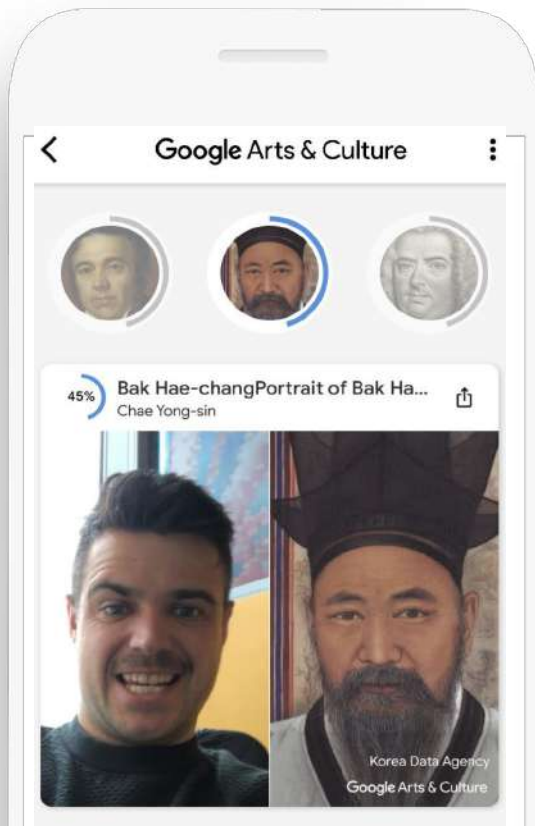

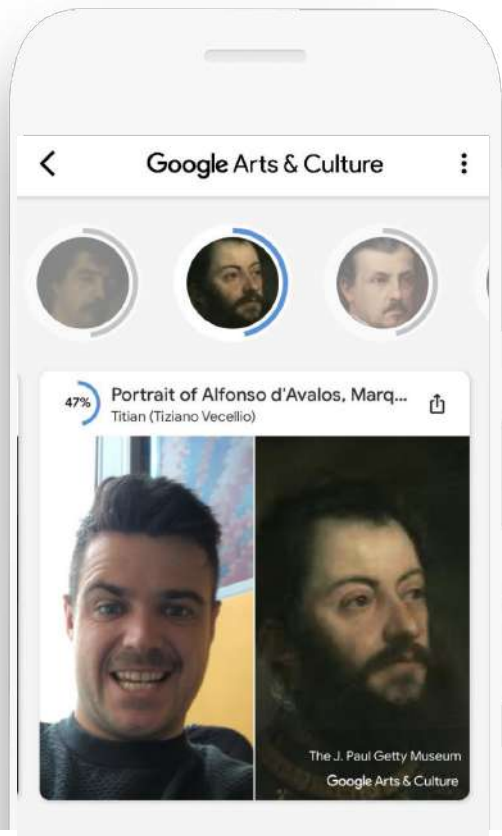

At 240 minutes?  
It's perfect

## Google Launches Self-Service Advertising Program

Google's AdWords Program Offers Every Business a Fully Automated, Comprehensive and Quick Way to Start an Online Advertising Campaign

**MOUNTAIN VIEW, Calif. – October 23, 2000** – Google Inc., developer of the award-winning Google search engine, today announced the immediate availability of AdWords(TM), a new program that enables any advertiser to purchase individualized and affordable keyword advertising that appears instantly on the google.com search results page. The AdWords program is an extension of Google's premium sponsorship program announced in August. The expanded service is available on Google's homepage or at the AdWords link at [adwords.google.com](http://adwords.google.com), where users will find all the necessary design and reporting tools to get an online advertising campaign started.

Since the beta debut of AdWords earlier this month, the program has seen widespread adoption by approximately 350 businesses and advertising agencies worldwide. The AdWords program offers advertisers the same highly targeted ad serving technology as the premium sponsorship program, and through a simple to use self-service system, enables advertisers to sign up and monitor a campaign directly from the Google website.

What e

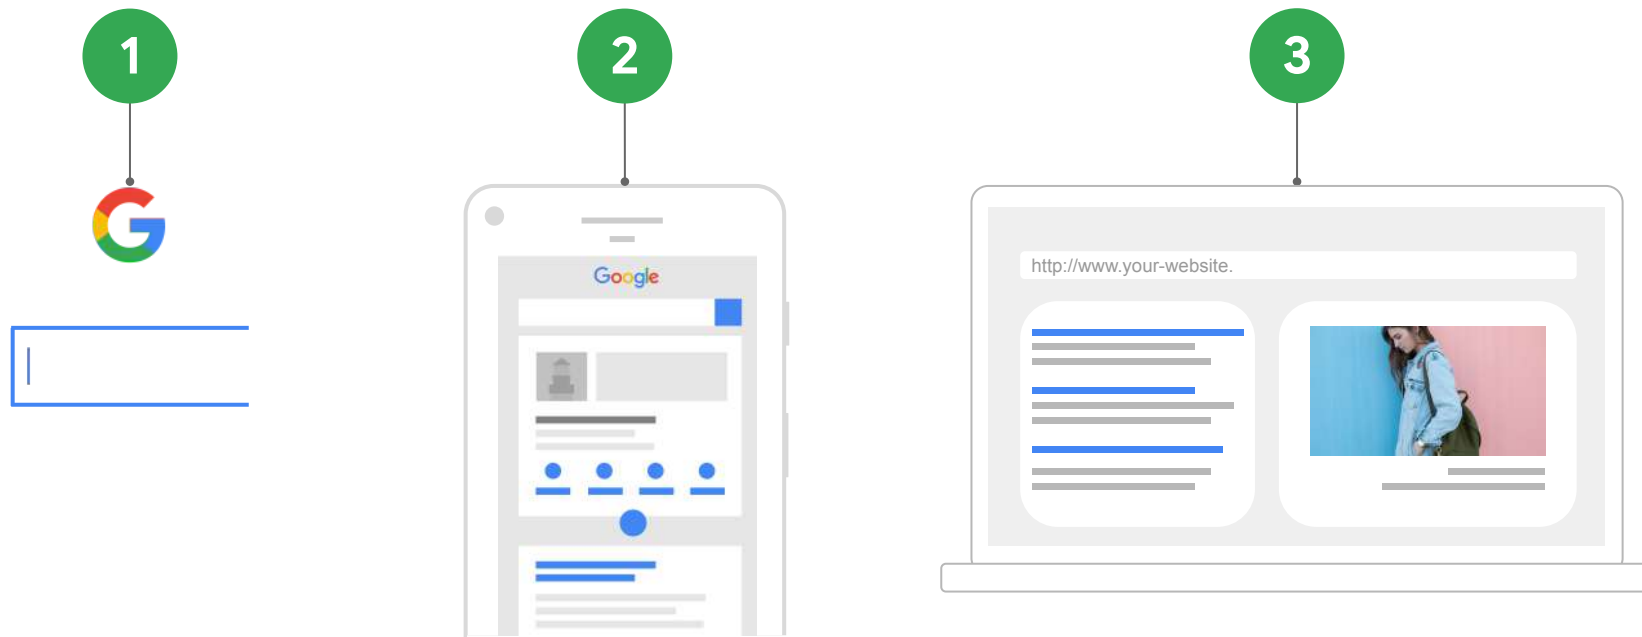

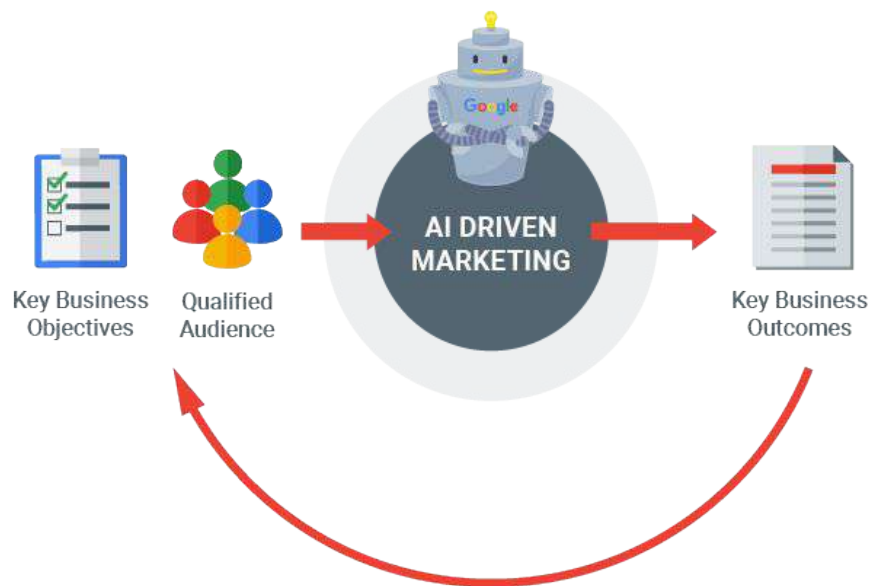

# We used to think of consumer journeys as linear

# Today's consumer enjoys a rich online shopping journey

# The vision for ML and marketing is to make things very simple...

1. Determine the business objectives you want to achieve
2. Define your qualified audience with targeting
3. Let the machine figure out where to go to engage the relevant prospects \*a very complex task!

“The rise of automation doesn’t steal jobs, it just changes the game.”

Daniel Gilbert, Brainlabs CEO

## Automate

Bid management

Keyword mining  
and negatives

Writing variations  
of ad copy

and strategy

At the end of the day,  
higher profits are what  
running a successful  
business is all about.

# There are four key areas in ads that use machine learning

Acquire more customers, more efficiently  
by adjusting bids in real-time

Bidding

Creative

Use the right message  
for every moment, for every user

Find people who aren't your customers,  
but should be with dynamic campaigns

Targeting

Attribution

Bid beyond the last click  
using data-driven attribution

The image features a background of a light gray circuit board pattern with various lines and circular nodes. In the center, there is a square component with an orange border and a light orange fill. Inside this square, the word "Targeting" is written in a bold, orange, sans-serif font. To the right of this central component, there is a faint, gray-outlined version of the same square component, suggesting a secondary or alternative state.

**Targeting**

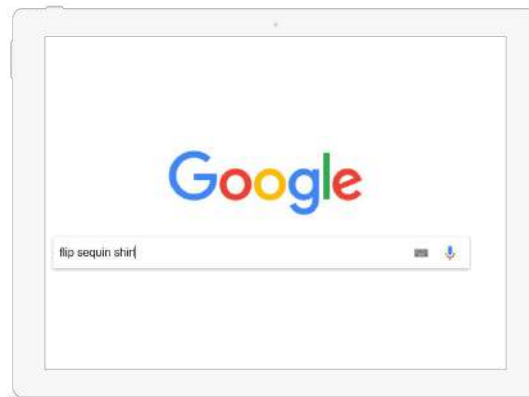

# Dynamic Search Ads

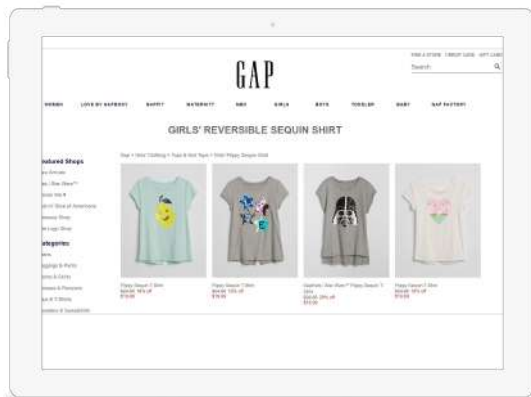

Google scans website for content

User search related to content

User sent to relevant page

More Control

Better Reach

✓ good for  
lots of control  
non-indexed sites

– considerations  
can be limiting  
doesn't maximise  
DSA potential

✓ good for  
large websites  
organised clearly by  
theme

– considerations  
site must be crawlable

✓ good for  
comfortable with full  
automation confidence  
with website

– considerations  
careful monitoring

# Key benefits of Dynamic Search Ads

## Reach & Performance

Cover all keywords relevant to your website, super charge with audiences & auto bidding

## Transparency

Websites are larger and more dynamic than they have ever been

## Efficiency & time saving

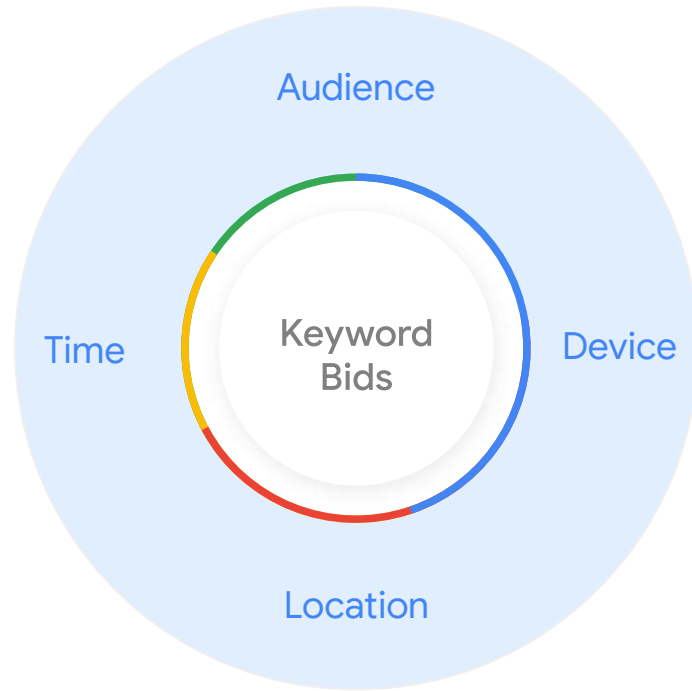

Save time since you don't need to decide on & manage extensive keyword lists

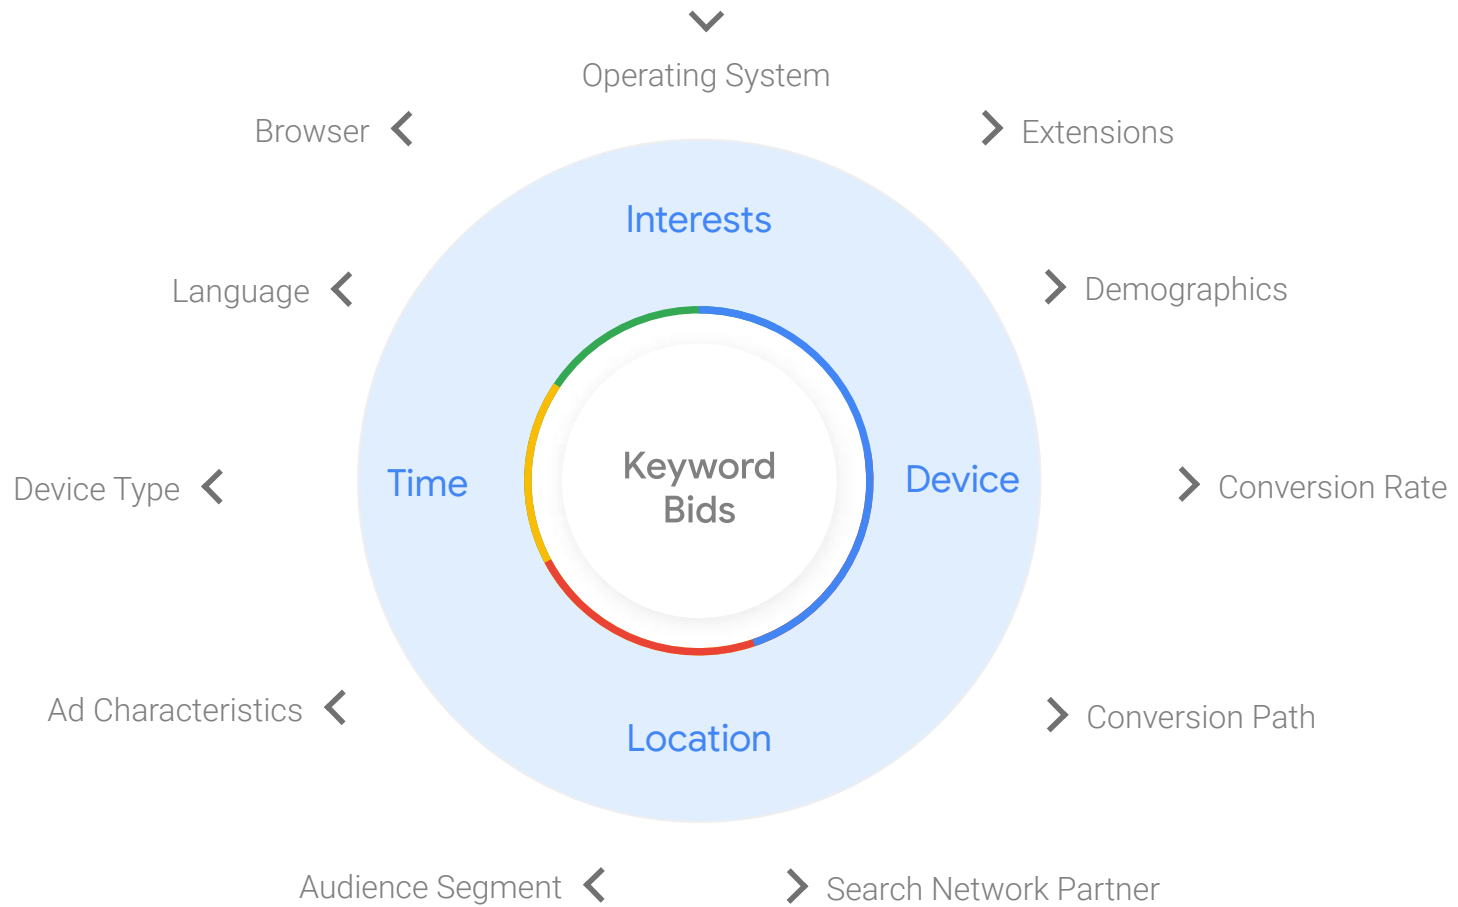

Keyword  
Bids

# Google Ads Smart Bidding

Target ROAS

Max Conversions

## Business Outcomes

(What are you optimizing for?)

Leads

Sales

Call Volume

The more data our algorithms  
are fed, the faster the results  
will optimize

**The algorithm  
loves DATA**

# The algorithm loves STABILITY

Avoid **drastic** changes in  
campaigns

**Making Drastic Changes**

# The algorithm loves SIGNALS

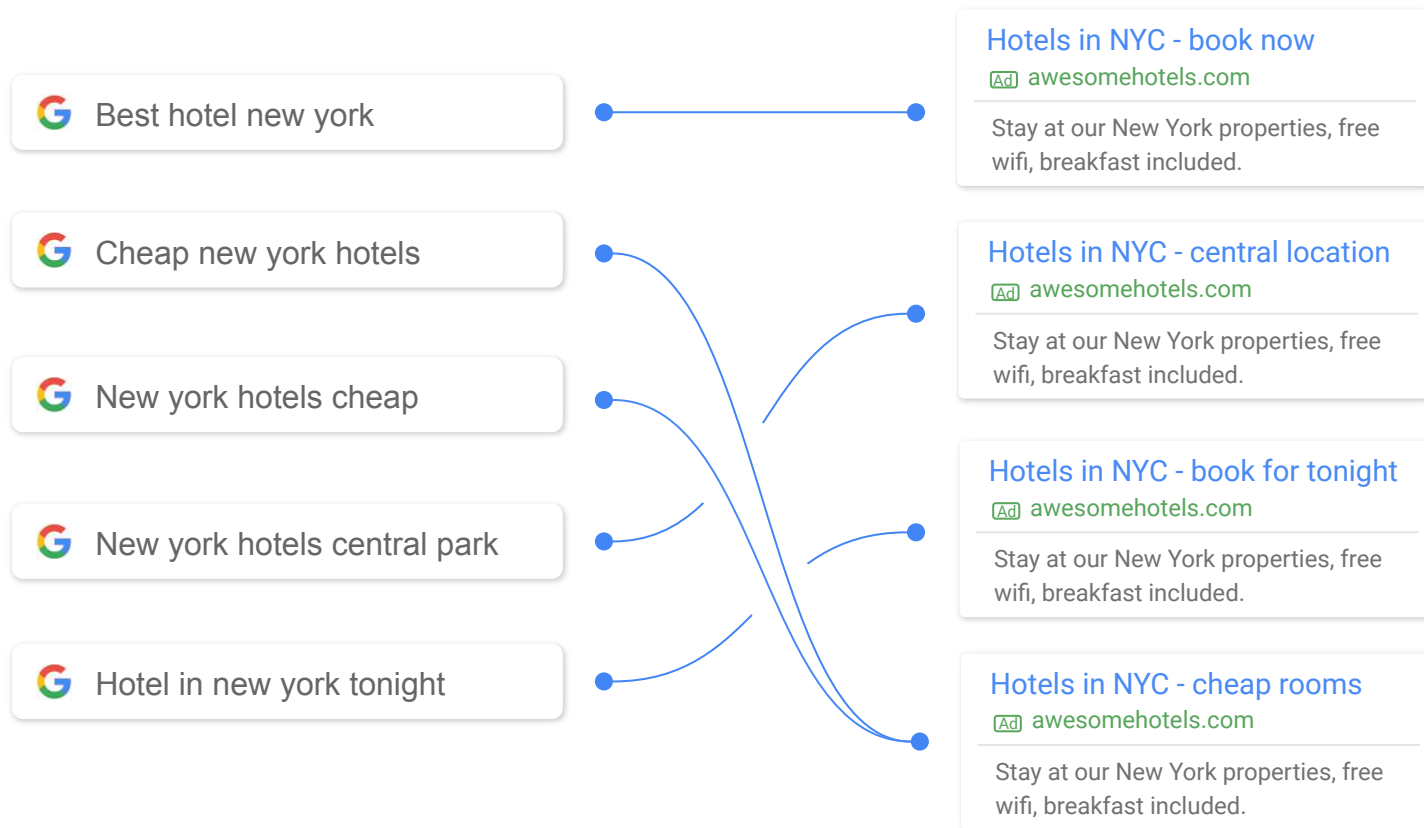

The higher quality of the data  
our algorithms are fed, the  
better the performance will be!

Creative

# The more ads you have, the better the performance

# Each search in Google has a different context...

Device

Location

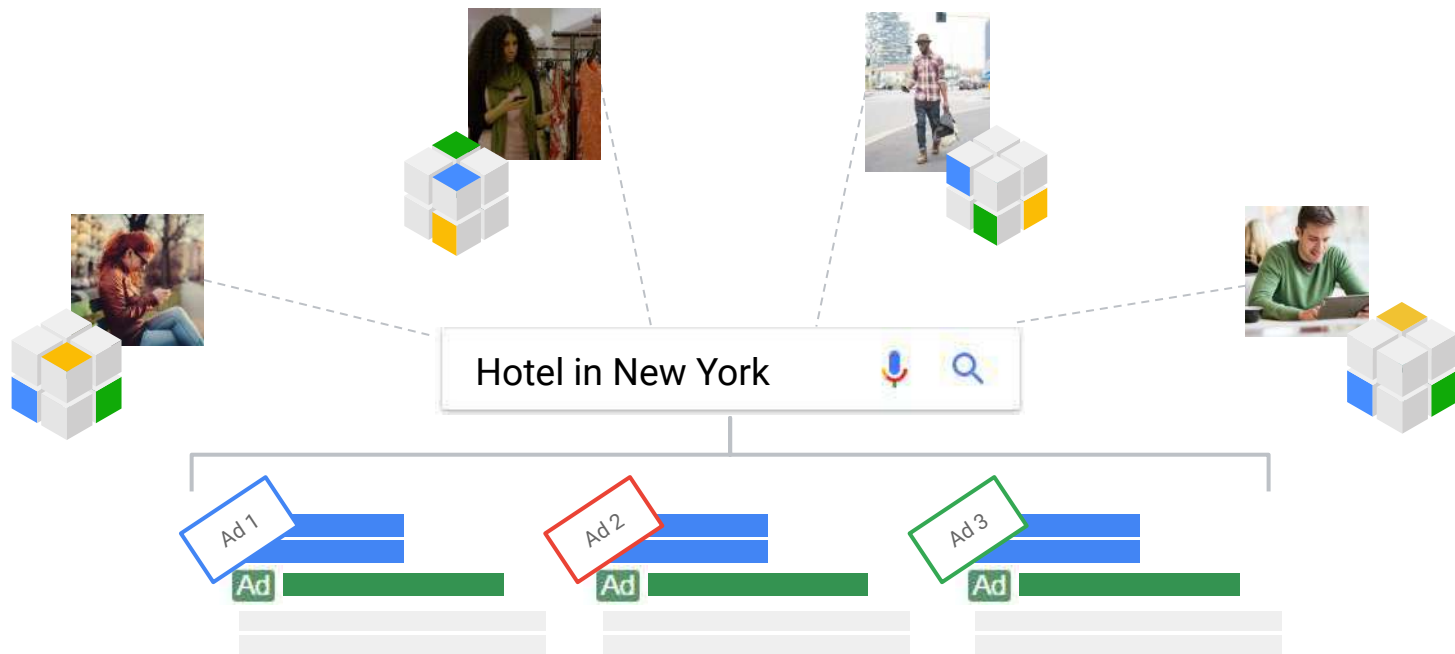

Time

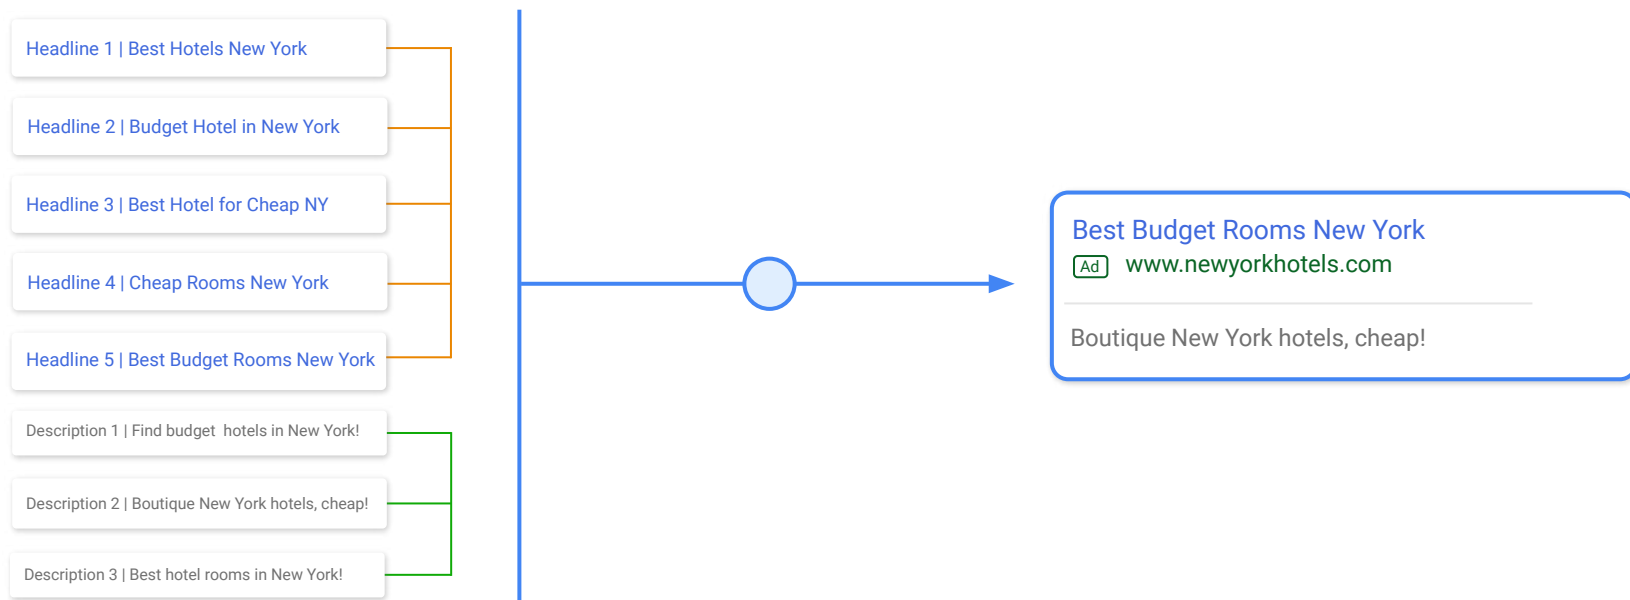

Day of the week

... in turn, each Ad is relevant for each specific search context

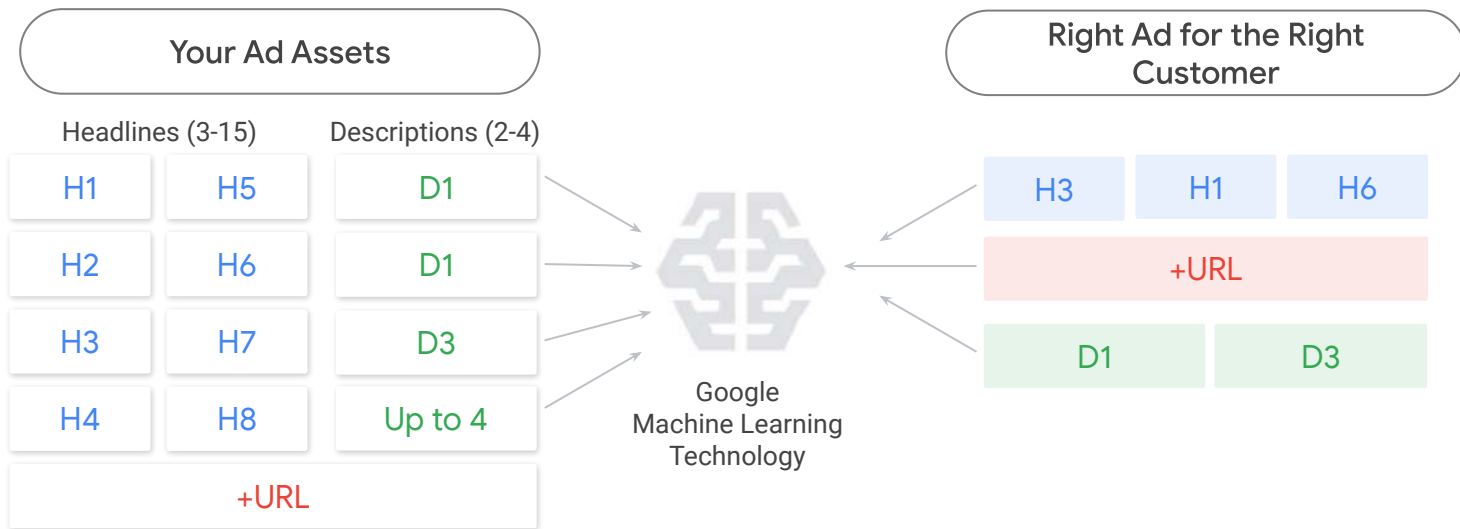

# Responsive Search Ads

Generated by mixing and matching headlines and description lines that you provide, simplifying the creation and management of text ads

# So how does it work?

- ✓ Supply up to **15 headlines** and up to **4 descriptions** as your assets.
- ✓ The system will use these assets to automatically show different combinations depending on the user query

# Key benefits of Responsive Search Ads

- **Reach more potential customers** with multiple headline and description options that give your ads the opportunity to compete in more auctions and match more queries.

- **Increase ad group performance** by attracting additional clicks and conversions that your existing text ads aren't capturing, since responsive search ads help you compete in more auctions.

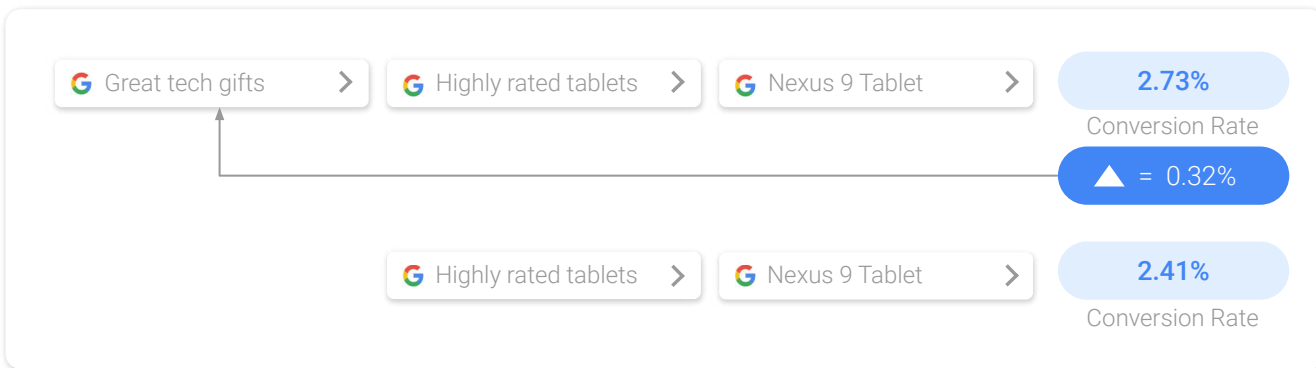

- **Create flexible ads** that adapt to device widths and **save time** by providing multiple headline and description options, then let Google Ads show the most relevant combinations to your customers.

## Rule based models

## Data driven model

- ✓ Cross-device
- ✓ Fully automated
- ✓ Easy to set up
- ✓ More data for smarter bids

# In Summary

Leverage **Dynamic Search Ads** to capture all relevant volume

Use Dynamic Search Ads to ensure you are not missing out on high-quality traffic

Adopt **Smart Bidding** to drive business results

Use Machine Learning and a vast quantity of auction time signals to deliver the best possible performance

Implement **asset based creatives**

Responsive Search Ads allow you to surface the most relevant creative at any given time

Enable **data-driven attribution**

Assign credit to each paid Search click in the user journey

### **User behaviour is changing**

There is more data than ever.

Automation, powered by machine learning, will enable you to win

Search marketers need to focus more on

**measurement and data quality**

Human Intervention combined with ML drives Business Outcomes.

Our products are and will increasingly be powered by machine learning.

**Think about marketing strategy in a machine learning first world**

# THANK YOU!
